hEX S

hEX S is a six port wired Gigabit router for locations where wireless connectivity is not required. Compared to the hEX, the hEX S features an SFP port and PoE output on the last port.

It is affordable, small and easy to use, but at the same time comes with a very powerful dual core 880 MHz CPU and 256 MB RAM, capable of all the advanced configurations that RouterOS supports. The device has a USB 2.0, PoE output for Ethernet port #5 and a 1.25Gbit/s SFP cage.

- Dual Core 880 MHz CPU
- 256 MB RAM
- 1.25Gbit/s SFP cage
- Five Gigabit Ethernet ports (one with PoE output support)
- USB 2.0
- microSD slot
- 12 V - 57 V input support by PoE or power jack
- 802.3at/af support
- IPsec hardware encryption (~470 Mbps)
- Dude Server package support
- RouterOS L4 installed
- 24 V 1.2 A power supply included

IPsec hardware encryption (~470 Mbps) and The Dude server package are both supported, and the microSD slot provides improved read/write speed for file storage.

SXT LTE kit

The SXT LTE kit is a device for remote locations that are within cellular network coverage. However, due to it’s professional LTE chip design and high gain antenna, it can provide connectivity for your building even where cell phones can’t.

In comparison with our first generation model RBSXTLTE3-7, the SXT LTE kit is powered by faster CPU and supports not only LTE with more speeds, but also 2G (international model only) and 3G, as well as much wider band range. The unit is equipped with two Ethernet ports (the second port has PoE-out functionality), so you can use it to power up another device. Unit is shipped with a 24 V power supply, but can support full range 18-57 V and is 802.3af/at compliant.

The device has a built in high quality Category 4 modem for speeds of up to 150 Mbit/s downlink and 50 Mbit/s uplink, as well as two Micro SIM slots for backup link.

Two versions are available:

**RBSXTR&R11e-LTE** includes LTE modem that supports International LTE bands 1, 2, 3, 7, 8, 20, 38 and 40.

**RBSXTR&R11e-LTE-US** includes LTE modem that supports LTE bands 2, 4, 5 and 12, mostly used by mobile operators in United States, Canada and Latin America.

- 24 V 0.38 A power adapter
- PoE injector
- Metal ring
- Pole mounting bracket

RB450Gx4

The RB450Gx4 is an Ethernet router with five Gigabit Ethernet ports, a serial port, 512 MB NAND memory and a microSD card slot. In addition, it supports full 10 V - 57 V input by two power jacks or PoE (802.3af/at or passive PoE) and can provide PoE output for Ethernet port #5.

It is powered by MikroTik RouterOS. It comes without an enclosure, you are free to use it in your own. The device form factor is identical to our previous RB850 and RB450 series, so you can even use the same enclosures.

The device is powered by a quad core ARM CPU, has 1 GB of RAM and supports hardware IPsec encryption. The device is powered by RouterOS - the operating system, which will turn this powerful system into a highly sophisticated router, firewall or bandwidth manager.

LDF 2

The LDF (Lite dish feed) is an outdoor wireless system with a built in antenna, meant to be installed on satellite offset dish antennas. The dish will act as a reflector, amplifying the signal.

This means you can use any available satellite TV dish with an offset mount to quickly deploy powerful long range wireless links. The offset mount is universal at 40 mm diameter, and the LDF can easily be placed inside it. Since the LDF itself is a tiny little package, it makes shipping and deployment simple and low cost.

Using large enough dishes, it is possible to obtain antenna amplification of 30 dBi or more. All it takes is to find a spare satellite dish with an offset mount, and put your LDF device. The device comes preinstalled with RouterOS and is ready to use.
SXTsq Lite2

The SXTsq Lite2 is a compact and lightweight outdoor wireless device with an integrated antenna. Perfect for point-to-point links or as a CPE unit. It is compact, weatherproof and easy to mount. The SXTsq Lite2 retains a 10 dBi antenna like the SXT Lite2, our previous model, yet the antenna design has been improved and the physical size has been dramatically reduced - the SXTsq is two times thinner.

The enclosure includes slots for directly attaching a hose clamp mount in three different mounting places, with ability to be mounted on horizontal railings. The device includes one 10/100 Mbit Ethernet port. There is also an easily accessible grounding connection to protect it against lightning.

Comparison to previous SXTs

- 24 V 0.38 A power adapter
- Metal ring
- PoE injector

Train the Trainer in Riga and Bangkok

Are you a certified MikroTik specialist? This is your chance to start a new business as a trainer! We invite you to become a certified trainer!

MikroTik will be conducting Train the Trainer course in Riga, Latvia, on June 18 - 20th, 2018, in RouterOS Training center and Bangkok, Thailand, on August 15 - 17th.

A MikroTik certified trainer can conduct MikroTik certified training courses anywhere in the world.

Become a MikroTik certified trainer and give the gift of knowledge!
